

35-42 WEEKS DELIVERY ON YOUR NEXT PROJECT? >>>>

Did you know that scansteel foodtech still can deliver a complete pet food preparation line between 35-42 weeks?

scansteel foodtech is today one of the world's most innovative manufacturers of machines, equipment and complete processing lines and solutions for the global pet food industry and we still manage to be competitive in our always fast delivery time on processing lines/project as well as single machinery and equipment.

From knowledge to success

scansteel foodtech has grown rapidly in recent years, which has resulted in our production capacity increasing by 2000% over the last 8-9 years due to decades of know-how, our commitment to individual projects and of course our quality craftsmanship from engineering to hygiene design and safety.

Specialized in what we do

With more than 38 years of know-how and experience in our business, we have never "just" been a manufacturer and supplier of machines, but we are your business partner throughout the entire project from A-Z. With access to our experienced professionals and with our knowledge, you are in good hands.

Our commitment to projects

You, our valuable customer will always be assigned with a dedicated scansteel foodtech project manager when ordering a processing line with scansteel foodtech. The project manager will be your main contact person at scansteel foodtech who keeps track of all processes starting from the point of ordering (sometimes even before ordering), engineering, manufacturing, final assembly, FAT, installation at your facility, startup, running-in, training and SAT. As part of our project management we shall keep regular project meetings with your team, at agreed time intervals, in order to secure that all aspect of the project is on track, both technically as well as according to agreed time plan.
